EITS ATTACK
SIMULATION
AS A SERVICE

BE PREPARED FOR ANYTHING.

Cyber attacks can devastate your organization if you're not prepared. Do you know how your company would respond to a real-world ransomware, supply chain, or other attack?

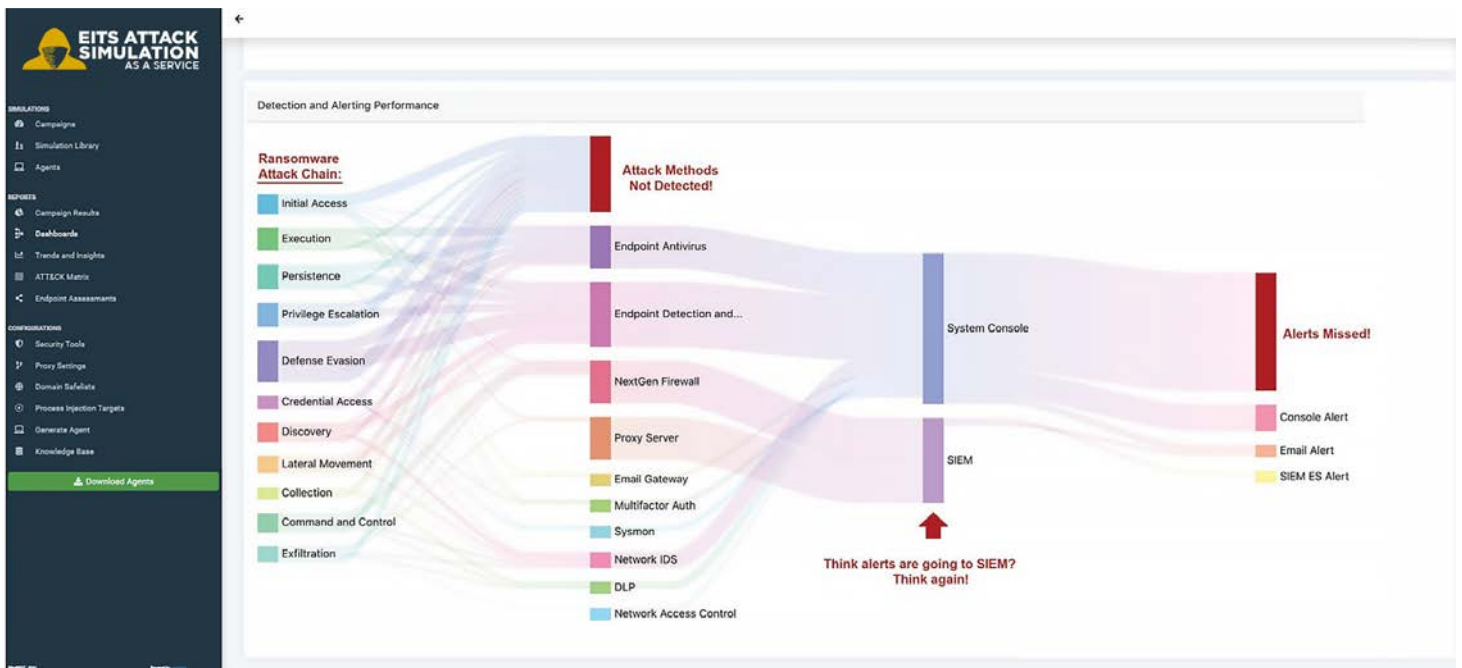

Only 20% of adversary cyber-attack techniques are actually identified by detection and alerting tools due to misconfigurations, changes in tool controls, alerting failures, and other dynamic factors.

Leveraging the power of EITS Attack Simulation as a Service, EITS can simulate a variety of attack-chains from initial access to data exfiltration, visualizing security control failures and comprehensive directions for remediation to remove coverage blind spots.

Cyber attack techniques commonly missed by detection and alerting tools today.

REMOVE SECURITY BLINDSPOTS BEFORE THE ATTACK.

EITS Attack Simulation as a Service clearly visualizes gaps in your security configuration.

TRANSFORM YOUR NETWORK DEFENDERS WITH CONTINUOUS TESTING.

SERVICE OVERVIEW

Our attack simulation service executes real-world cyber attack techniques to test whether detection and alerting controls will respond as expected, with hands-on training for the network defense team with various attack techniques and options to detect attack activity.

SIMULATION TECHNOLOGY TOUCHPOINTS

Customer Endpoints & EITS Agents

EITS simulates attacks via “agents”, which are run on a small sample of endpoint(s) that the customer selects.

Simulation & Defend Platform

Simulation detection and alerting results are scored in the EITS web application, which visualizes security stack coverage and provides remediation recommendations for improvement.

Empower Network Defenders with EITS Attack Simulation As a Service

- ✓ Efficient 8 hour exercise
- ✓ Simulates threat hunting & remediation on your production network
- ✓ Delivers detailed, comprehensive reporting:
 - Executive Overview
 - Detailed pass/fail ratings
 - Identification of gaps
 - Recommendations for improvement

EITS ATTACK SIMULATION EXERCISE SCHEDULE

Contact EITS today to see a demo and discuss how to expand your practice with **EITS Attack Simulation as a service.**

GET STARTED

The EITS mission is to “To understand each customer’s unique needs, guide them toward the right security investments, and provide the best possible professional services to defend their people and data.”
