

Endpoint Management

Enable users to be productive, on any device,
without compromising IT security

SOLUTION BRIEF

How are you managing your mobile devices, laptops, and other user endpoints? Do you know if your user's devices are compliant with your IT policies? Today users are looking for more ways to remain productive while working on any device, which cause security issues for day-to-day management of risks. Developing a strategic Endpoint Management strategy can mitigate the potential issues, however creating an Endpoint Management strategy is a complex process.

In our Endpoint Manager Workshop EITS will enable you to follow a sustainable path to secure all of these new endpoints being added daily to your networks. The necessity of implementing a comprehensive solution for endpoints follows a detailed practice of identifying managing and securing the endpoints, such as laptops, desktops, mobile devices, and servers.

Endpoint Manager Workshop Schedule

Our mission is to ensure you have a complete understanding of the capabilities, integration options, and overall value of the industry standard for endpoint management.

In this 20-day workshop, you will learn how Endpoint Management will help you transform remote device and application management while increasing your organization's productivity. We'll show you how to deploy desktop and mobile apps and from a unified console and you will gain an understanding of:

- A scalable path to endpoint management capabilities your unique organizational needs
- How an endpoint management solution will cater to the modern workforce
- Reduce technical debt by taking advantage of existing investments

By the end of this workshop, you will have a fundamental understanding of the modern endpoint management architecture and areas of improvement for your remote workforce. In addition, learn the value of integrated security solutions.

KEY BENEFITS

- Improved Security
- Increased Efficiency
- Enhanced Visibility
- Advanced Compliance
- Reduce Costs
- Improve User Experience

Detail of Benefits

Improved Security: Endpoint management can help improve an organization's security posture by ensuring that all endpoints are properly configured, patched, and protected against malware and other threats.

Increased Efficiency: Can help streamline IT operations by automating routine tasks, such as software updates and patch management, and reducing the need for manual intervention.

Enhanced Visibility: Provides greater visibility into the endpoints on their network, including hardware and software inventory, usage patterns, and security status.

Advanced Compliance: Helps an organization comply with regulatory requirements by ensuring that all endpoints are properly configured and secured.

Reduce Costs: Reduces IT costs by automating routine tasks, reducing the need for manual intervention, and improving the efficiency of IT operations.

Improve User Experience: Improves the user experience by ensuring that endpoints are properly configured and optimized for performance.

Your resilient business requires Modern Endpoint Management

Our endpoint management workshop goes beyond mere knowledge. We go the extra mile by setting up your actual environment and providing you with all you need to successfully set up and manage all access and best practices for your organization.

EITS helps businesses, education and government agencies build and manage secure IT environments for a changing world. We secure what matters most: their business, their IT environment, their intellectual property and their reputation. Our holistic approach addresses the Architectural, Operational and Organizational facets of Information Security applying a proven architecture blueprint for scalable, agile, manageable IT environments, hardened to DOD-level security standards. Agencies and businesses who have suffered severe data breaches have tapped EITS to remediate their issues, and to dramatically lower the risk of future events. We are driven by our culture of Excellence and Substance: We Always Make Mission.
