

# Identity and Access Management

Enable centralized identity access and management for the modern workforce

## SOLUTION BRIEF

Identity and access management (IAM) is essential for security and regulatory compliance. It can also be a significant undertaking without the right skills, strategy and support from identity and security experts to help you architect and manage solutions across hybrid cloud environments and leading IAM products and platforms. Also, when you consider the fact that laws are holding board members personally liable for IT security breaches and ineffective security controls, it is easy to see why IAM has become an important topic in the boardroom.

### Identity and Access Management Workshop

Our Modern Identity Access Management Workshop enables customers to assess, understand, and implement highly efficient user and device management solutions for their entire organization.

Simplify user credential management and enforce strong authentications for all users, devices, and apps from a central location. By the end of this workshop, you will know how to discover all connected devices and apps on your network, the fundamentals of identity management, SSPR and MFA, conditional access, app management, and how understanding this all brings value and cost savings to your company.

The vital necessity of implementing a comprehensive solution for identity and access management is an undeniable truth in the modern era of data integrity and security. Our mission is to ensure you have a complete understanding of the capabilities, integration options, and overall value of the industry standard for identity access management.

#### Visibility

Real-time analytics on the overall health of your Security protocols via Security Score with actionable steps

#### Control

Simple credentialing and conditional access management utilizing modern security authentication protocols

#### KEY BENEFITS

- A “least privilege” model to minimize access risk
- Protect resources in the cloud with MFA
- Lay a solid foundation for identity governance
- IAM Workshop tailored to your specific environment

### **Discovery**

Create an inventory of all apps and devices connected to your network and the potential threats they pose

### **Efficient**

Increase overall productivity and reduce costs through a single user and application security management solution

### **Flexibility**

Hybrid and Cloud-based options for secure user authentication and credential management in any environment

### **Strategy**

All the information you need to create and implement a comprehensive security strategy

Enable the ability to see and control what your users can access within Active Directory, on premises, or in any cloud environment. Enable Single Sign On, Multi-Factor Authentication and Conditional Access to provide ease of use and integrated security for your local and SaaS applications. We reduce complexity and speed implementation for you.

EITS helps businesses, education and government agencies build and manage secure IT environments for a changing world. We secure what matters most: their business, their IT environment, their intellectual property and their reputation. Our holistic approach addresses the Architectural, Operational and Organizational facets of Information Security applying a proven architecture blueprint for scalable, agile, manageable IT environments, hardened to DOD-level security standards. Agencies and businesses who have suffered severe data breaches have tapped EITS to remediate their issues, and to dramatically lower the risk of future events. We are driven by our culture of Excellence and Substance: We Always Make Mission.
